Professional Summary

Entry-level Python backend developer and B.Tech Information Technology graduate (May 2026, CGPA 8.17/10). Completed a full stack development program at Qspiders in September 2026, covering Python, Django, REST APIs, SQL databases (PostgreSQL, MySQL, SQLite), unit testing and code reviews. Built a Django application with ORM models, database migrations and input validation from a written requirements document. Interned on the backend of a U.S. government document-verification platform (Python, MongoDB, AWS Lambda), where I debugged a data bug. Available to join immediately.

Technical Skills

Languages: Python, SQL, JavaScript, HTML, CSS
Backend & Web: Django, Django REST Framework, FastAPI, REST APIs, Django ORM, Decorators
Databases: PostgreSQL, MySQL, SQLite, MS SQL Server, MongoDB (debugging exposure)
Core Concepts: Object-Oriented Programming (OOP), Data Structures and Algorithms, Database Design, Query Optimisation, Input Validation
Testing & Practices: Unit Testing, Code Reviews, Git, GitHub
Cloud & Tools: AWS Lambda, Jupyter Notebook
ML Libraries: Scikit-learn, Pandas, NumPy, LangChain, FAISS

Projects

Student Management System Python, Django, SQLite, HTML, CSS
github.com/dhnaush0745/Student-Management-System-Using-Django

- Independently built a full-stack Django application from a written requirements document, with all code written by hand.
- Designed Teacher, Course and Student models using the Django ORM, with ForeignKey relationships, unique constraints and database migrations.
- Built function-based views, GET/POST handling and ModelForms with a custom `clean_roll_number()` validator that raises a `ValidationError` for duplicate roll numbers.
- Fetched records with `get_object_or_404` and kept record data out of URLs.
- Configured the Django admin with list display, search and filters.

VEC-Sentry: Runtime Defense for RAG Systems (Final Year Project) Python, Sentence-Transformers, FAISS, LangChain, Scikit-learn, Gradio
github.com/dhnaush0745/VEC-SENTRY-RAG-Security-Defense-System

- Designed a Python defense layer that audits chunks retrieved for a Retrieval-Augmented Generation (RAG) pipeline before they reach the LLM.
- Implemented three detection methods and three defense modes (block, warn, re-rank), and modeled three poisoning attacks on FAISS indexes.
- Evaluated on 2,000 documents and 200 test queries using detection rate, false positive rate, F1 and ROC-AUC, plus an ablation study.
- Built a Gradio application for document upload, querying and attack simulation. Developed using AI-assisted workflows.

Experience

Software Engineer Intern, SkillRank 10 Apr 2025 – 13 May 2025
Python, MongoDB, AWS Lambda

- Worked in a team on a web dashboard for a U.S. government construction-verification platform that extracts rules from uploaded land documents.
- Owned the file upload and verification module, checking that documents uploaded correctly and that extracted data reached the dashboard accurately.
- Studied the backend flow end to end, including text extraction, model integration and how AWS Lambda handles requests.
- Debugged a teammate's document-generation feature that produced empty tables. Traced the issue through MongoDB records to the code, found null values being written by mistake, and resolved the root cause.

Machine Learning Intern, Edunet Foundation (Shell Collaboration) 15 Jul 2025 – 16 Aug 2025
Python, Jupyter Notebook, Scikit-learn, SMOTE

- Built a fire-type classification model on NASA MODIS satellite data, handling class imbalance with SMOTE.
- Achieved 97.8% accuracy with a Random Forest classifier.

Machine Learning Intern, Edunet Foundation (IBM SkillsBuild) 15 Jul 2025 – 7 Aug 2025
IBM Watson AutoAI, IBM Watson Machine Learning, IBM Cloud

- Trained and compared ML pipelines for network intrusion detection, then deployed the best model as a web service with a hosted API endpoint for real-time scoring.

Professional Training

Full Stack Development Program, Qspiders 26 Jan 2026 – 6 Sep 2026 (Completed)
Python, Django, REST APIs, SQL (PostgreSQL, MySQL, SQLite), HTML, CSS, JavaScript

- Completed hands-on training in Python (including decorators and OOP), Django, SQL, HTML, CSS and JavaScript through coding tasks and real-world assignments.
- Built a REST API as a training project and wrote unit tests for backend code.
- Practiced database operations and query optimisation across PostgreSQL, MySQL, SQLite and MS SQL.
- Took part in code reviews, delivered technical presentations, and cleared periodic assessments and mock interviews.

Education

B.Tech, Information Technology 2022 – May 2026
Perunthalaivar Kamarajar Institute of Engineering and Technology, Puducherry | CGPA: 8.17 / 10

Certifications

- Reliance: Certified Python Course
- IBM SkillsBuild: RAG with LangChain / Fundamentals of Web Apps
- IBM SkillsBuild: Journey to Cloud
